PROJECTS

Smart Automated Window | GitHub

Dec 2025

- Developed an IoT-based automated window system that intelligently controls window opening and closing based on environmental conditions.
- Integrated **Arduino, LDR, rain sensor, MQ-series gas sensor, DHT22, servo motor, and 16x2 LCD** for real-time monitoring and automated control.
- Implemented automatic window operation based on **day/night conditions, rain detection, and air-quality conditions**, while displaying temperature and humidity data on the LCD.

Technologies: Arduino, Embedded C, Sensors, Servo Motor, IoT

TRAINING

Computer Programming — NeoColab | 150 Hours

Jan 2026 – May 2026

- Completed a 150-hour computer programming course with hands-on learning in programming fundamentals and problem-solving.
- Strengthened practical programming skills through consistent coursework and assignments.
